Design of all on-site and public improvements including utilities, drainage, and detention

CONSULTANTS

None

The new 679,289 square foot Klein High School is located on 121 acres in Harris County, Texas. DIG provided all civil engineering services for the on-site improvements and site amenities including parking, covered walkways, utilities, athletic fields, drainage and detention.

As part of the design of the site improvements, DIG utilized computer modeling to design the storm sewer system and detention pond to serve the site and the region.
